Project Report

Module:1

For this task, I used Canva to design a one-page infographic on Digital Literacy. I chose Canva because it is simple to use and provides many ready-made templates, icons, and design options that make the work easier and more attractive.

The main aim of my infographic was to explain the concept of digital literacy in a clear and simple way. I included important topics such as what digital literacy means, useful digital tools for students, safe internet practices, and professional online presence. I used short points and icons so that anyone can quickly understand the information without reading long paragraphs.

While making the design, I found it interesting to choose colours and arrange different sections properly. At the same time, it was a bit difficult to fit all the information on a single page without making it look crowded. Overall, this task helped me improve my creativity and also increased my understanding of how important digital literacy is in student life.

Module:2

For this task, I created and updated my profiles on GitHub, LinkedIn, and Kaggle. These platforms are very useful for students to build a professional identity and improve their skills.

On GitHub, I created my profile README where I added my name, branch, year, and my learning goals. I plan to upload my projects there in the future. On LinkedIn, I updated my education details, including my current degree, institution, and expected graduation year. This will help me connect with professionals and explore career opportunities. On Kaggle, I explored datasets and learned about data-related practice, which will help me improve my analytical skills.

This task helped me understand the importance of having an online presence. In the coming years, I will regularly use these platforms to improve my skills and build a strong portfolio. It was interesting to explore these platforms, although setting up profiles properly took some time.

Module:3

For this task, I used Google Forms to create a “Digital Literacy Awareness Quiz” for my batchmates. This platform is very easy to use and helps in creating quizzes and collecting responses in an organized way.

As required, I created exactly five questions, including multiple-choice questions and one short answer question. The quiz covers important topics like digital literacy, safe internet practices, email etiquette, and professional platforms. I tried to keep the questions simple and easy to understand so that students can answer them without confusion.

I also shared the form link in my README file and took screenshots of the form and the linked Google Sheet (response view), which I added to the task-3-platforms/ folder as instructed.

This activity helped me learn how to use digital tools for academic purposes. In the future, I can use Google Forms for quizzes, surveys, and collecting feedback in projects. One interesting part was seeing how responses are automatically recorded in a spreadsheet, which makes data management very easy. Overall, this task improved my practical knowledge of digital tools and their use in education.

Module:4

In this task, I learned about the importance of effective digital communication and responsible social media use. A common situation where poor communication can cause problems is when a student sends an email without a clear subject line or proper structure. For example, if an email requesting help or an extension is written informally or unclearly, the professor may misunderstand the message or even ignore it.

This issue can be avoided by following proper email etiquette, such as using a clear subject, polite language, and a well-structured message. It is also important to check the email before sending to avoid mistakes.

Additionally, I understood the importance of responsible social media behaviour, like thinking before posting and avoiding inappropriate content. Overall, this task helped me realize how good digital communication skills can create a positive impression and prevent misunderstandings in both academic and professional life.

Module:5

While researching this topic, the most surprising thing for me was how easily cyber frauds, especially UPI scams, can happen. Many people lose money just by clicking on a fake link or approving a payment request without checking properly. I realized that even small mistakes can lead to serious problems.

This task made me more aware of the importance of online safety and financial security. One habit I will personally change is that I will always verify links and payment requests before taking any action. I will also make sure never to share my OTP or UPI PIN with anyone.

Overall, this activity helped me understand that being careful and aware is the best way to stay safe online, especially as a college student who uses digital platforms daily.
